1 DeafMSG

Application Id: co.sokok.org.jitsi

2016-2024 Daniel F. Cordero B.

2 Multimedia material

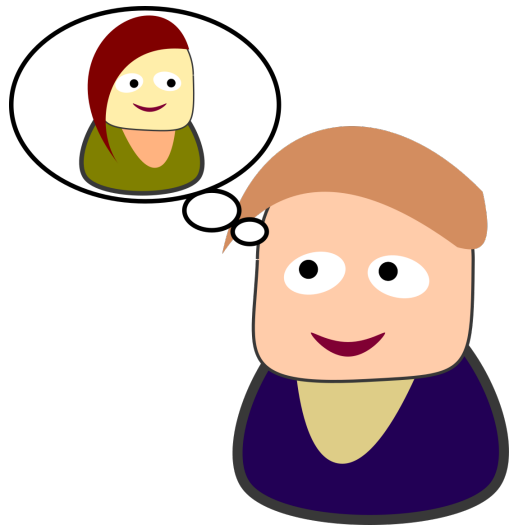

2.1 Video

You can see a short presentation of the application's use at these links:

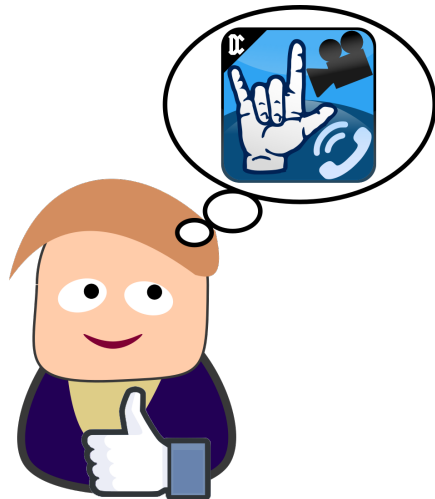

- <http://worditools.appz.dcco-ci.site/assets/videos/deafmsg/deafmsg-corto.mp4>
- <https://www.facebook.com/watch/?v=1268123943252766>

2.2 User guide with images

If you do not know how to use the app PLEASE READ THE INSTRUCTIONS below or DO NOT USE OR RATE THE APP until you understand it.

Suppose you need to tell your friend something.

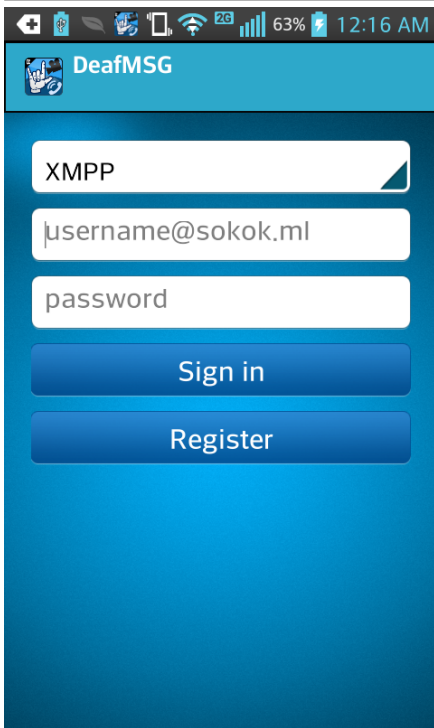

And you're looking for an app to help you achieve that - DeafMSG has you covered.

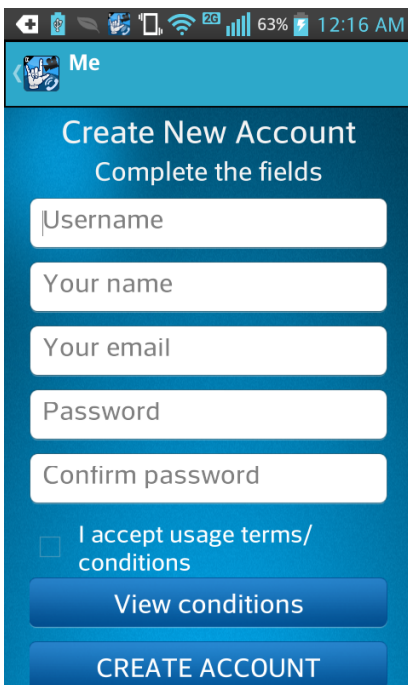

Open the app and accept all the permissions you are asked for. These are required for the different features. You will be allowed to continue once you have approved all of them.

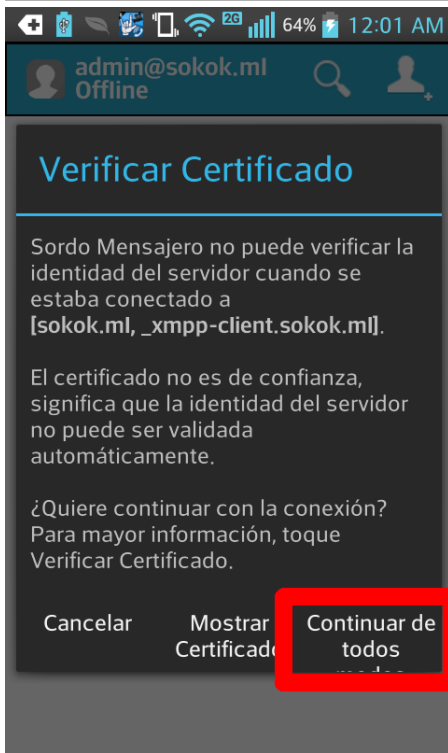

The application is about to load internal component initialization. Please wait.

From this screen you can log in to your preferred XMPP server or register for the default service.

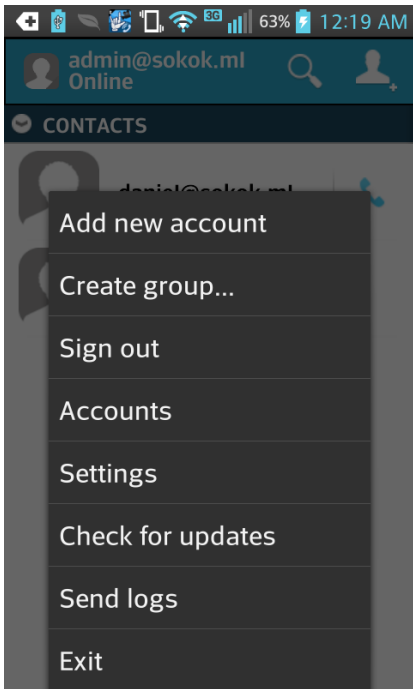

If available, you can register by completing all the required fields. Each field will display validation messages if the necessary conditions are not met.

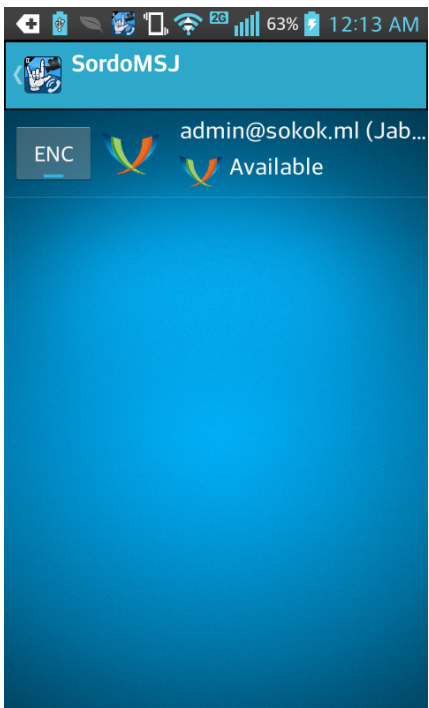

When you log in, your server may be using certificates that your device does not trust. You can continue logging in as instructed.

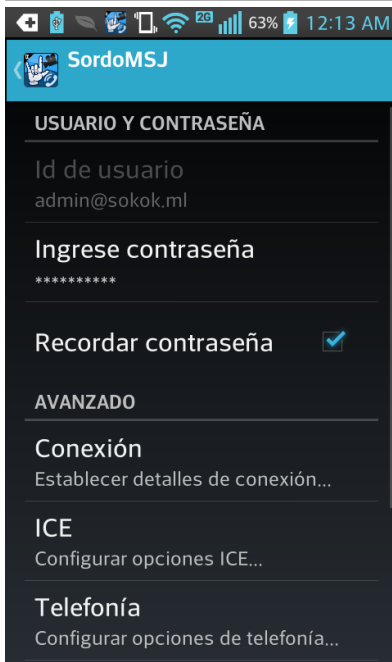

Once you are logged into your main account you can also send a message to your contact on a different service by doing the following.

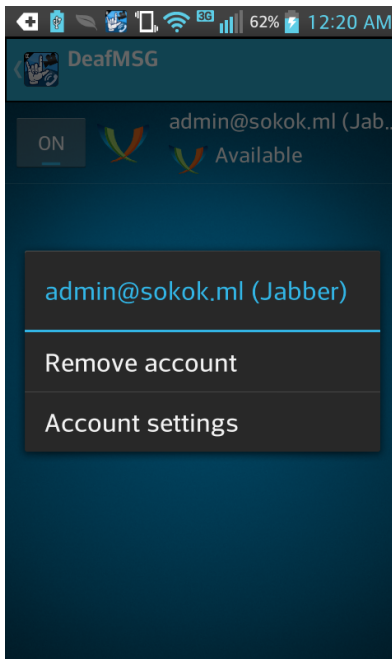

From the menu you must enter “Accounts”.

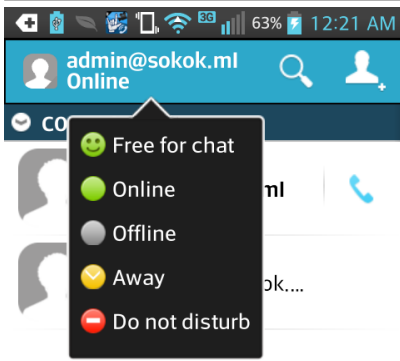

You can add a new account from the menu.

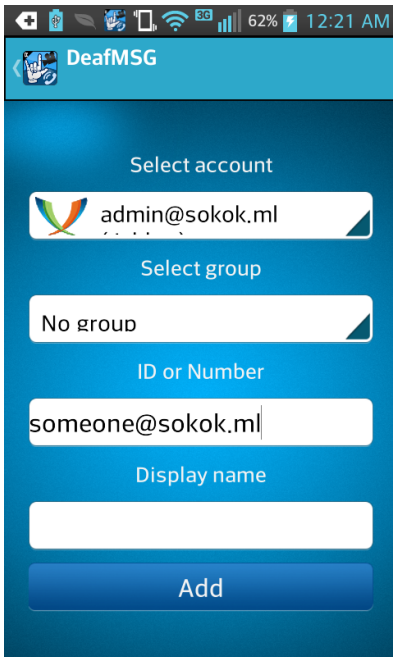

Enter your username and password and check the connection parameters. You can also modify the settings of an existing account.

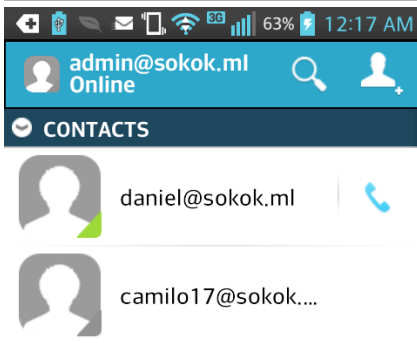

Once you have saved the change, if you need to make any further settings, display the menu corresponding to the selected account. You can also deactivate it with the “ON” switch.

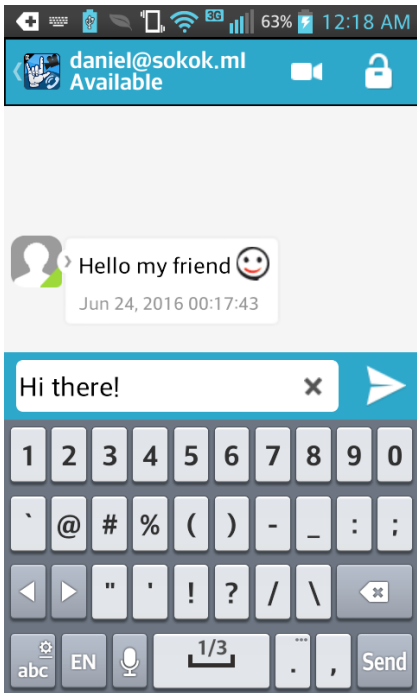

When adding an account, you will be able to select the status you want to display to other users. Selecting “Offline” will close the active connection.

From the menu you can also add new contacts to your account. Enter the user details.

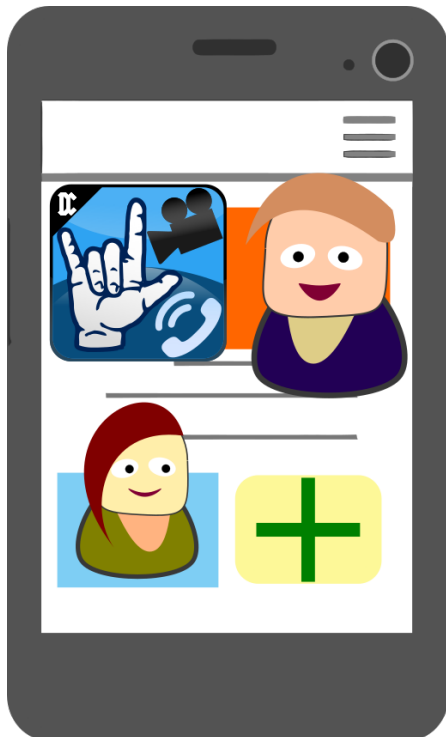

When the contact is added on the screen you will see it as a line.
If you tap on it you can send your messages to it.

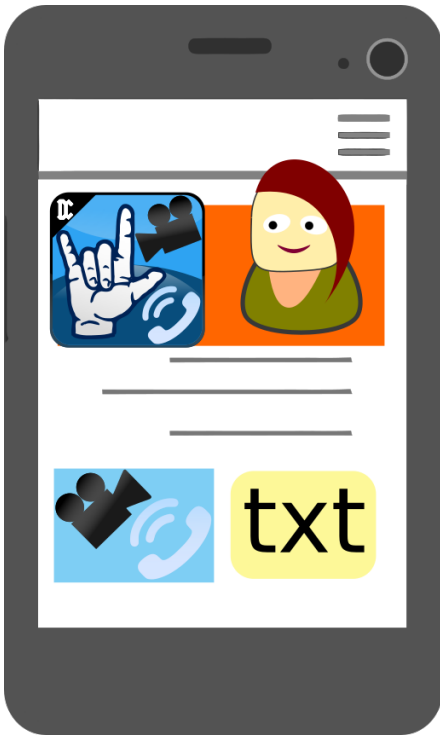

It's time to write. Your contact will receive the messages.

When your contact receives the message (Internet connection required) then the vibration will activate and will not stop until it is attended to.

Now you're in touch, and it'll be much easier to make sure your message was delivered.

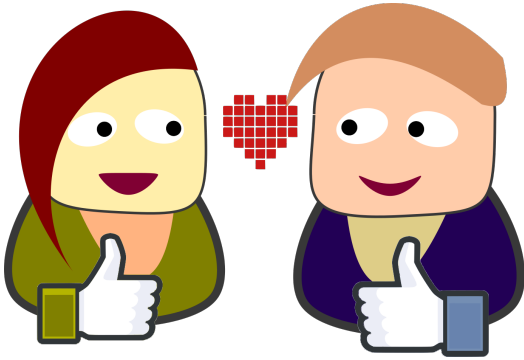

Suppose you need to call your contact, either with audio only or with video as well.

Then your device screen will activate the audio, and if you activate the camera you will be shown a thumbnail of your video and you will see your contact's video.

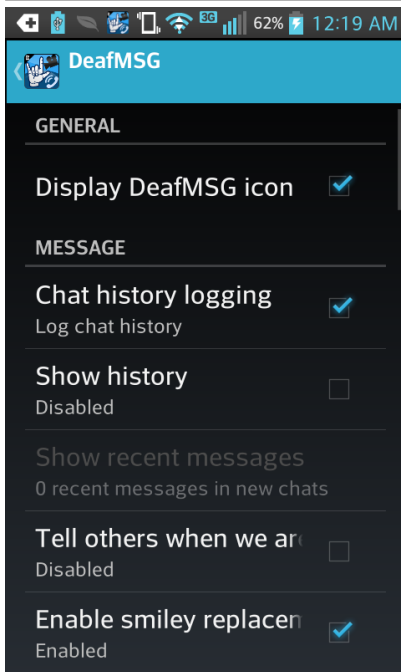

This way you will be able to express what you want much more easily, through whatever means seems best to you.

And so you can deliver your most important messages.

Suppose something doesn't work as you expected.

From the contact list, you can use the menu to select app options or account options. To change the options, you may need to reconnect your account or restart the app for some changes to take effect.

3 Description

Communicate in sign language using video calls or text messages. Available for Android, it allows people with hearing and speech difficulties to communicate in sign language using text messages and video calls with their mobile devices and ensure that messages are answered despite not being able to hear notifications.

3.1 Do you want to communicate with your loved ones?

If you are deaf or mute and need accessibility tools, this tool is for you.

DeafMSG can help you stay connected in an easy way. Add your friends and loved ones to your contact list.

DeafMSG keeps a list of your contacts available and notifies you when they are online. You can send text messages to your contacts and receive vibrating notifications when messages arrive. The vibration is persistent until the user answers it.

Message delivery can be done quickly and simply when you choose to speak via text. Many users may have hearing or speech difficulties, so the app allows them to make video calls so they can send their messages to their contacts using sign language.

3.2 Advantages

The following features are available:

- Flexibility to send text messages.
- Availability of video calls with or without audio.
- Flexibility to copy text to the clipboard.
- Flexibility to copy text to other applications.
- Simple and efficient interface.

3.3 Requirements

- Constant Internet connection.
 - To send and receive availability notifications.
 - To send and receive messages to other users.
 - To connect audio and video.
 - It is recommended to have a flat rate or WiFi.
- Supported Android version: 7.1: Other versions may work but have not been tested.
- An XMPP account on a properly configured communications server, with no traffic restrictions.

3.4 Are you deaf or mute?

Several accessibility tools have been developed for people with hearing, speaking and other difficulties. Please see our other applications posted on the website for more information.

3.5 Support

PLEASE do not post a first comment or send a message that just says “It doesn’t work”. That does not help to solve the problem, and we cannot work on it. Below and on the page you will find the contact email: cualifikapp@gmail.com. Send your bug report and it will be attended to to the extent of the available resources. We hope that they are few. Look for help, fixes and guides on the product page.

DeafMSG has functionality to automatically send bug reports. In the hamburger menu you will find the “Send logs” function. The attachments that are attached to the generated email serve to identify the cause.

Except as provided herein, this application is distributed and provided “AS IS.” Therefore, the Developer makes no warranties, express or implied, and you hereby disclaim any and all implied warranties, including warranties of merchantability and warranties of fitness for a particular purpose. The web services used have their own privacy policy and terms of use that can be found on the author's website.
